SOIL TEST REPORT  
GARDEN SOIL

COOPERATIVE EXTENSION  
University of Wisconsin-Extension  
University of Wisconsin-Madison  
Department of Soil Science

Lab Number: 4387

Access Code: s72h

Date received: 12/3/2024

Account: 555005

Client: Quintas

County: Brown

Date processed: 1/16/2025

Send to:

Extension Brown County -  
STEM Innovation Center, 2019 Technology Way, Rm 113  
Green Bay, WI 54311

Area Type
Garden/Vegetable
Area Designation
8th

RECOMMENDATIONS

Lime to Apply

No soil pH adjustment is recommended.

Fertilizer to Apply

The following summary specifies the actual amount of nutrients needed based on the results of your soil analysis. Most plants require at least an annual nitrogen application, but recommended potassium should only be applied once and soils retested in 2-3 years to determine if more is needed.

Actual Nutrient Need (lbs/100 ft²)		
Nitrogen (N)	Phosphate (P <sub>2</sub> O <sub>5</sub> )	Potassium (K <sub>2</sub> O)
0.30	0.0	0.2

These nutrients can be applied using many different commercial fertilizers. The following suggestions are provided for your reference.

**Nitrogen:** Apply 0.4 lbs of regular (high N) fertilizer per 100 sq-ft to meet plant nitrogen needs.

**Phosphate:** No phosphate fertilizer needed. High and very high phosphorus is not detrimental to plant growth but may contribute to surface water pollution.

**Potassium:** Apply 1.0 lbs of high potassium fertilizer per 100 sq-ft to meet plant potassium needs.

Use of high potassium fertilizer will increase available potassium to a level optimum for plant growth and supply some needed nitrogen. For a description of fertilizer grades please see <http://uwlab.soils.wisc.edu/pubs/grades.pdf>

For more information on how to customize your vegetable garden fertilizer applications please see [http://uwlab.soils.wisc.edu/pubs/custom\\_fertilizer.pdf](http://uwlab.soils.wisc.edu/pubs/custom_fertilizer.pdf)

Environmental Tips

Soil tests indicate that potassium fertilizer is needed. Broadcast and incorporate recommended materials into the upper 6-8 inches prior to planting or topdress to previously established areas and water in thoroughly.

Leafy vegetables, sweet corn, tomatoes, and vine crops may require additional nitrogen at flowering. Place about 1 oz (2 Tbl) urea or 4 Tbl of a high nitrogen fertilizer in a band at least 3 inches from the plant. Use 1.5 lbs (3 cups) urea or 3 lbs (6 cups high nitrogen fertilizer) for every 100 ft or row.

If growing a scab susceptible variety of potato a lower pH is desired.
