SOIL TEST REPORT
GARDEN SOIL

COOPERATIVE EXTENSION
University of Wisconsin-Extension
University of Wisconsin-Madison
Department of Soil Science

Lab Number: 1887

Access Code: kcev

Date received: 5/2/2023

Account: 555005

Client: Annie Schmitz
2019 Technology Way Rm 113
Green Bay. WI 54311

County: Brown

Date processed: 5/11/2023

Send to:

Extension Brown County -
STEM Innovation Center, 2019 Technology Way, Rm 113
Green Bay, WI 54311

Area Type
Garden/Vegetable

Area Designation
Church Road

RECOMMENDATIONS

Lime to Apply

No soil pH adjustment is recommended.

Fertilizer to Apply

The following summary specifies the actual amount of nutrients needed based on the results of your soil analysis. Most plants require at least an annual nitrogen application and soils retested in 2-3 years to determine if more is needed.

Actual Nutrient Need (lbs/100 ft^2)

Nitrogen (N)	Phosphate (P_2O_5)	Potassium (K_2O)
0.30	0.0	0.0

These nutrients can be applied using many different commercial fertilizers. The following suggestions are provided for your reference.

Nitrogen: Apply 1.2 lbs of regular (high N) fertilizer per 100 sq-ft to meet plant nitrogen needs.

Phosphate: No phosphate fertilizer needed. High and very high phosphorus is not detrimental to plant growth but may contribute to surface water pollution.

Potassium: No potassium fertilizer needed. High and very high potassium is not detrimental to plant growth but adding more will not benefit crops.

For a description of fertilizer grades please see http://uwlab.soils.wisc.edu/pubs/grades.pdf

For more information on how to customize your vegetable garden fertlizer applications please see http://uwlab.soils.wisc.edu/pubs/custom_fertilizer.pdf

Environmental Tips

Leafy vegetables, sweet corn, tomatoes, and vine crops may require additional nitrogen at flowering. Place about 1 oz (2 Tbl) urea or 4 Tbl of a high nitrogen fertilizer in a band at least 3 inches from the plant. Use 1.5 lbs (3 cups) urea or 3 lbs (6 cups high nitrogen fertilizer) for every 100 ft or row.

If growing a scab susceptible variety of potato a lower pH is desired.
